

# IETF FAX WG Meeting

chairs:

Claudio Allocchio <Claudio.Allocchio@garr.it>

Hiroshi Tamura <tamura@toda.ricoh.co.jp>

Pittsburgh, PA, USA

August 2000

draft-ietf-fax-tiff-fx-(07).txt

(RFC 2301 revision)

Status: at the IESG in AD Review

Interoperability report available

# draft-ietf-fax-minaddr-v2-01.txt

GSTN addresses

*GSTN addresses (commonly called "telephone numbers")*

-----

...except by the MTA that is named on the right-hand-side (domain).

*...except by an MTA that handles messages for the domain given in the right-hand-side.*

# draft-ietf-fax-minaddr-v2-01.txt

`global-phone = "+" 1*( DIGIT , written-sep )`

*global-phone = "+" 1\*( DIGIT / written-sep )*

# draft-ietf-fax-faxaddr-v2-01.txt

Note:

See section 4.1 in the event multiple sub-addr per fax-mbox need to be specified.

*Notes:*

*For the case of a single subaddress, only numbers are allowed in <sub-addr> which is consistent with T.30, T.33, and this document. While T.30 and T.33 use SPACE to pad its field, padding isn't necessary in the <sub-addr> field defined by this document.*

*For the case of multiple subaddresses, T.33 specifies the "#" character should be used to specify multiple subaddresses. However, only digits are permitted in the <sub-addr> field defined by this document. Refer to section 4.1 in case multiple <sub-addr> per per <fax-mbox> need to be specified.*

# RFC 2846 (full addressing)

- **Many address elements pre-defined**
  - **global phone syntax**
  - **local phone syntax**
  - **recipient name**
  - **...**
- **IANA registration modules and procedures**
