draft-ietf-dhc-option-guidelines-03

IETF 73

Mark Andrews

ISC

Draft status: Final?

- Recently revived from expired status.
- Major review by Alfred Hönes, largely to clarify and clean up/simplify language.
  - One mis-edit is identified, extra hyphenation in the security section.
- No idea what else needs to be added.
  - Author is still soliciting appendix text from other implementers. The objective of the document is to ease adoption; anything you can say that makes adopting an option easier (does not need to document internal design).
- Ready for WG last call?
