

# draft-ietf-geopriv-sip-lo-retransmission-01

- Two substantial changes
- Differentiated recommended semantics from syntax
  - Syntax: header v. parameter of Geolocation header
    - This is for the SIP WG to decide
  - Semantics of the two are the same (basically)
    - Retransmission header can exist even when Geolocation header doesn't
- B2BUA language softened
  - We can't compel B2BUAs, but we can show consequences of behaviors
