Status lo-sec / 3693bis

- No update to document since IETF 72
- Working on new version, for 19 December
  - Address comments from Martin Thomson
  - Possible clarifications to 3693:
    - Goal: Enable well-meaning applications to do the right thing; malicious applications aren't stopped
    - Mandate: Include privacy info with location
    - Applicability: Wherever location-aware agents pass location around, e.g., protocols, APIs
- Reviews and feedback on direction/scope would be really helpful right now
