

http-gss status update

Leif Johansson IETF 73

What is this?

- draft-johansson-http-gss-04
- Support for GSS-API in HTTP
- Successor to RFC4559 with
 - channel bindings
 - support for proxies for multi-roundtrip GSS mechs

Summary of diff since -03

- Remove hard dependency on SPNEGO
 - IANA registry of HTTP auth mech -> GSS mech binding
- HTTP header now supports RFC 4559 token format
 - RFC 4559 is be a special-case when you turn off state mgmt

Missing until `_really_` done

- Review of error handling
- Support unique channel binding as an option
 - revive my http-cb draft
- Examples
 - when everyone agrees on the protocol
