NSIS User Guide and Extensibility Draft Update

draft-nsis-ext-02

Elwyn Davies

IETF 73 - Wednesday 19 Nov 2008

What has been done...

- Joined up
  - Jukka Manner and Roland Bless' user guide
  - John Loughney's earlier extensibility draft
- Matched all parts to current state of main drafts
  - GIST
  - QoS and NATFW NSLPs
  - QoS Template
- Added more on incremental deployment
- General clean up

What more we must do...

- Check satisfies IESG extensibility doc requirements
  - specifically flagged on GIST review, but...
  - relevant across suite of protocols
- Emphasize:
  - there is a shared object number space
  - objects should be reused if possible
- Emphasize that if you make a new MRM it needs to be deployed in GIST
  - might be more challenging than just a new NSLP
- Correct the file/draft name

What might need doing...

- Talk a bit more about extending existing NSLPs vs. writing a new one
  - maybe more about where you should put functionality

- Reference the RAO option draft

Finally

- Confirm WG is happy with the structure
- WGLC after next revision
  - before end of 2008 - milestone!
