Putting the RAO back into GIST

draft-hancock-rao-gist-00

Minneapolis, 19th November 2008

Draft Overview

- Original GIST drafts used RAO for packet interception
  - Latest version uses N-tuple analysis
- This draft: puts RAO back in
  - Intended status: experimental
- Content:
  - Specification changes (actually very small) in section 5
  - Rationale for when to use RAO (large lengthy) sections 2/3/4
  - IANA considerations, backwards compatibility aspects, sections 6 [and partly 5 – see rfc2119 terms especially]
- Next steps
  - Probably needs alignment with nsis-ext draft
  - Depends also on progress of rahman RAO draft
