

Delay and Loss Update

44th IETF Meeting
Minneapolis, MN
15 March 1999

Since last meeting

- WG Last call
 - Last call extended to get ITU input
 - Garry Couch (T1A1.3 chair) noted clock terminology discrepancy
 - I investigated, but found no direct mapping
 - Clarification/correspondence added
-
-

Main point of confusion

- ITU: “clock” as frequency reference
- IPPM: “clock” is TOD clock
Time is UTC

Other terminology

- synchronization
- accuracy
- resolution
- skew
- time error
- time error from UTC
- sampling period
- time drift

Other differences with I.380

- Minor, mostly different perspective
- See next talk
