
Additional security- related requirements for PPVPN

**Jeremy De Clercq, Olivier Paridaens, Yves
T'Joens, Alcatel**

**Chandru Sargor, Vijay Srinivasan, Cosine
Communications**

scope

requirements for PPVPN mechanisms

- allow for different ‘granularities’ in the security offering (PE–PE, per VFI/VPN, per route)
- allow for different ‘levels’ of security (data separation only, authentication, encryption)
- a way to dynamically advertise the security–related information
- the usage/addition of hard (encryption) security should not affect the scalability
