

# Analysis Draft

draft-ietf-nsis-signalling-analysis-02.txt

Manner, Fu, Pan

# Changes since -01

- Merged with the “RSVP transport” draft from Pan and Schulzrinne
- Added a very preliminary Appendix that compares RSVP to the NSIS requirements
- Restructured the document for easier reading
- Minor reference updates

# Next Steps in Editing

- Based on chair's comments (most substantial):
  - Section 3.5 needs more proof (Ping)
  - Write a proper summary (All)
  - Security section could wrap-up the common security-related problems of existing protocols (Hannes)
  - Still a need to merge parts of the Thomas RSVP+MIP draft?
  - Move the Appendix to /dev/null
