

draft-ietf-simple-prescaps-00

IETF#59

Mikko Lönfors

mikko.lonnfors@nokia.com

Changes

- Aligned with callee-caps-03
- Added negated attribute to: <audio>, <video>, <application>, <data>, <control>, <text>, <event-package>, <method>, <extension>, <scheme>, and <language> elements
- Changes all media type tags (voice, video, application, data, control, text) to be complex types
 - Added type element into each (no separate <type> allowed)
- Added list elements into event-packages, Methods, extensions, schemes, and languages elements
- Added extension tags to be able to represent feature tags not present in callee-caps:
 - <token>
 - <string>
 - <boolean>
 - <numeric>

Open issue: separate <type>

- Currently <type> element outside <[media]> elements is not allowed. This is probably needed for example to:
 - <type>message/cpim</type>
 - <type>multipart/related</type>

- Proposal: Add separate <type>

Open issue: negated for <type>

- Currently <type> cannot contain negated attribute
- For example you can negate <audio> and <video> but not media types individually
- Is there any need to have negated attribute separate for <type>?

- Proposal: No

Open issue: extension tags

- Current draft has extension tags for:
 - <token>
 - <string>
 - <boolean>
 - <numeric>
- Are these enough?
- Author needs help to define these correctly

Next steps

- Proposal: Write new version and last call
