Moving forward

- Not about picking one of presented approaches
- Take agreed-upon reqs
- Start protocol work to address those
- Make sure further extensions are not precluded
- Let RPSEC continue discussion on other reqs

Work

- Required authorization models:
  - Central authority AND
  - Peer-to-peer
- What infrastructure elements do we need?
- What BGP protocol mechanisms need to be specified?
- What other pieces are missing?

Next steps

- Discuss here, understand what needs to be done
- Use mailing list
- Write charter
- Create a WG
