

Framework for Metric Composition

Al Morton

Steven Van den Berghe

March 21, 2006

Status

- Proposed Framework adopted following IETF-64
- Introductory material from the individual temporal and composition drafts combined to form the Framework:
 - [draft-svdberg-ippm-temporal-00.txt](#)
 - [draft-morton-ippm-composition-01.txt](#)
- New material illustrates the relationship with [draft-ietf-ippm-multimetrics](#)

Types of Composition

- Complete/Sub-Path (or Concatenation in Space)

- Aggregation in Time (12x5min stats ->1 hr)
- Aggregat. in Space

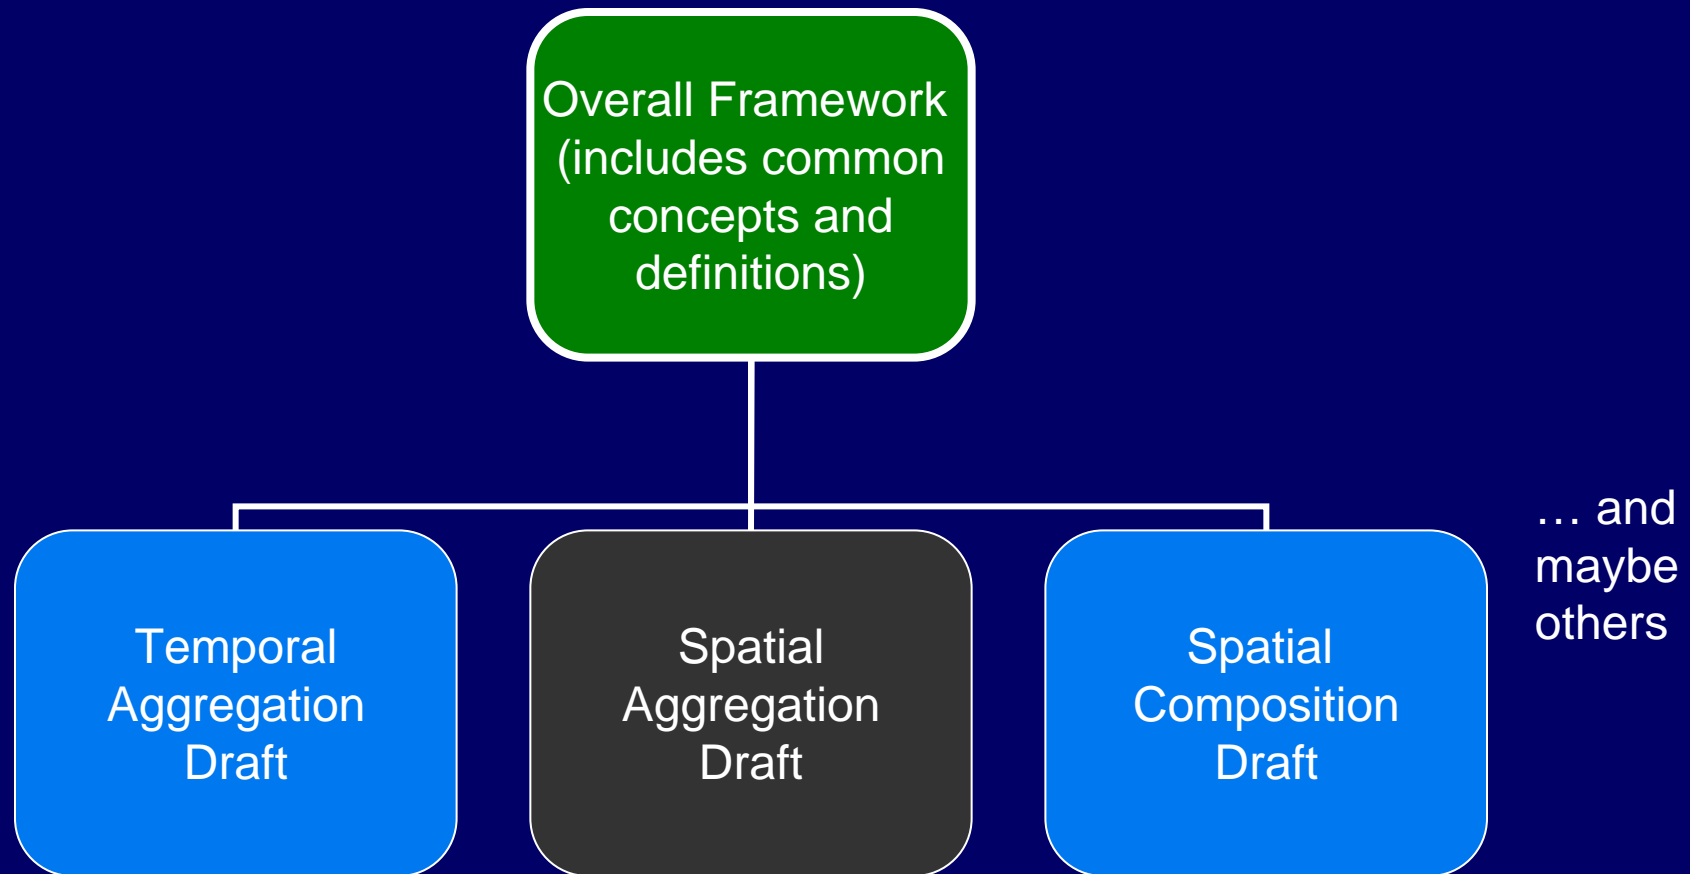

D_{xy} (not known) $\approx D_{xk} + D_{ly}$???

	Delay	Load
A-B	24.5 ms	1 Gbit/s
B-C	7.8 ms	3 Gbit/s
A-C	4 ms	9 Gbit/s
Domain	$1/13 * 24.5 + 3/13 * 7.8 + 9/13 * 4 = 6.4$ ms	13 Gbit/s

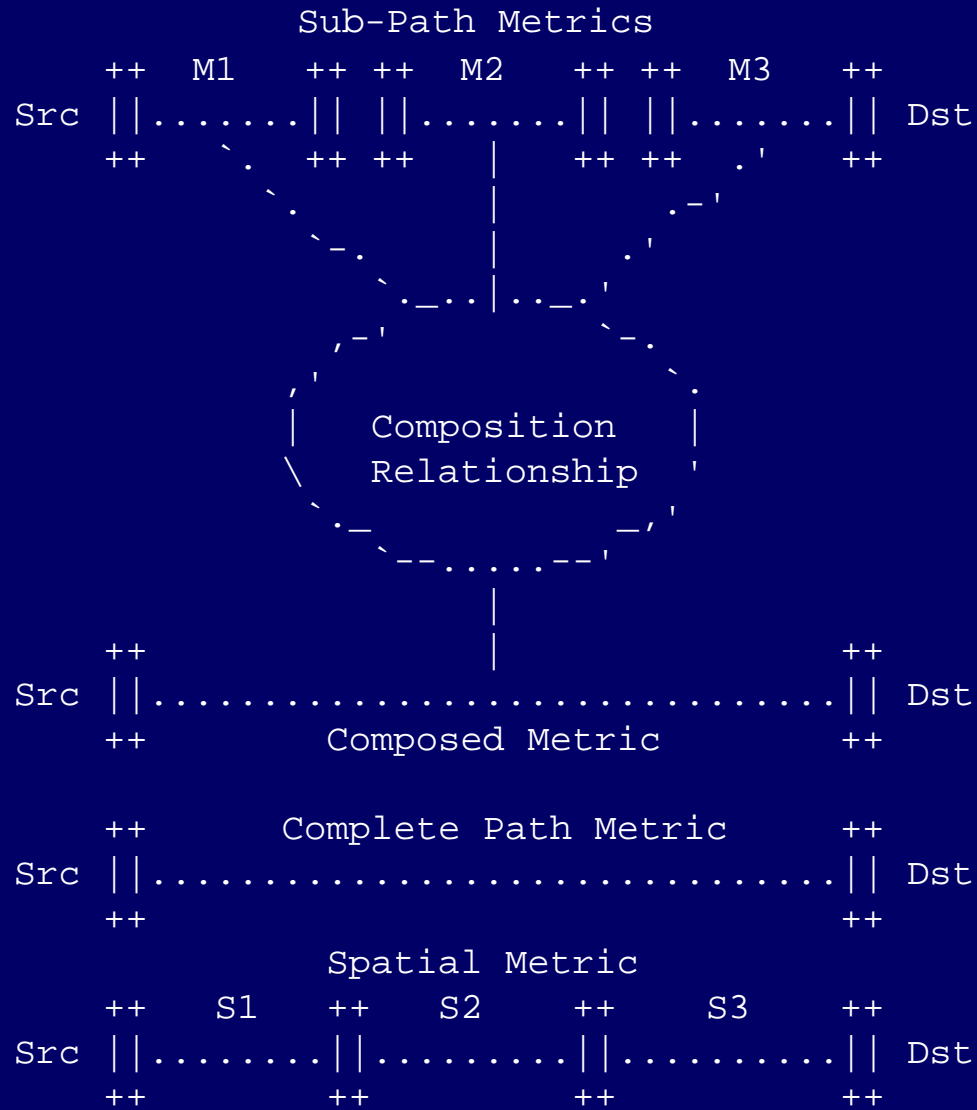

draft-ietf-ippm-framework-compagg-00.txt

Framework Draft Outline

1. Introduction
 - 1.1. Motivation
2. Purpose and Scope
3. Description of Metric Types
 - 3.1. Time Aggregation Description
 - 3.2. Spatial Aggregation Description
 - 3.3. Spatial Composition Description
 - 3.4. Help Metrics
 - 3.5. Higher Order Composition
4. Requirements for Composed Metrics
5. Guidelines for Defining Composed Metrics
 - 5.1. Ground Truth: Comparison with other IPPM Metrics
 - 5.2. Deviation from the Ground Truth
6. IANA Considerations
7. Security Considerations
8. Acknowledgements
9. Normative References

Ground Truth

Figure 1 Comparison with other IPPM Metrics

Deviations from Ground Truth

- Inaccuracies of the underlying measurements
 - Errors may propagate
- Differences in Scope between the Ground Truth and component metrics
 - Measured path different from actual, try to minimize

Next Steps

- ❑ Expand coverage of Temporal/Spatial Aggregation classes
- ❑ Collect common terms
- ❑ Convince folks to Read and Comment
- ❑ Master the xml2rfc process and XxE...
