

# RTCP HR

draft-ietf-avt-rtcphr-00.txt

Alan Clark, Amy Pendleton, Rajesh Kumar,  
Kevin Connor, Geoff Hunt

# Issues and concerns

- Removal of general text related to translators/mixers to another draft
- Draft needed extensive cleanup to accommodate comments
- Suggestion to negotiate sub-blocks via SDP

# Alignment

- ITU-T SG16 has been tracking RTCP HR for use in H.248 and providing comments and suggestions back
- Intent – to keep this dialog going to help get draft completed mid-2007

# Mid-Network Applications

- Understand need to relocate text to other drafts (e.g. topology) however.....
  - Some applications, e.g. transcoding gateways and conference bridges, do require guidance on calculation of metrics and what payloads need to be sent in each direction (East/ West/ North)
- Propose to put text in giving exact methodology for construction of payloads

# Everything else

- No particular comments received on metrics – these seem fairly stable and acceptable
- Use of SDP for sub-block negotiation – any comments?
