

# Three Minor Fixes

Phillip Hallam-Baker  
VeriSign Inc.

# Security Usability

# Member since

- What information do we have today that might provide value to relying parties?
  - Date that subject first obtained a certificate
  - In the database
  - Can be put into the certificate at low cost

# Community Name

- LOGOTYPE Extension
  - Subject
  - Issuer
  - List (Community)
- Accessibility
  - Must work in voice, Braille browser etc.
  - We have X.500 DN for Subject, Issuer
  - Need analog for Community Logos

# Security Indicator Suppression

- Device based Certs
- Authentication: Negligible
- WebTrust Compliant: Yes (!)
- Requirement: work with any browser
  
- Solution:
  - OID states that security representations are made to infrastructure, not user
