draft-ietf-mboned-lightweight-igmpv3-mldv2

Liu Hui (liuhui47967@huawei.com)

Cao Wei (caowayne@huawei.com)

Hitoshi Asaeda (asaeda@wide.ad.jp)

Major Idea of LW draft

- Principle:
 - Removal of rarely used EXCLUDE (S,G) operation
 - Assurance of compatibility with full version
- Method:
 - Host side: Reducing report type relating to EXCLUDE(S,G)
 - Router side: Eliminate filter-mode and simplify processing

LW Message Type Evolution

	IGMPv3	LW Ver-00	LWVer-01	LW Ver-02
In response to query	IS_IN(S,G)	IS_IN(S,G)	ALLOW(S,G)	ALLOW(S,G)
	IS_EX(S,G) IS_EX(null,G)	IS_EX(null,G)	IS_EX(null,G)	TO_EX(null,G)
Interface state change	TO_IN(S,G) TO_IN(null,G)	TO_IN(S,G) TO_IN(null,G)	TO_IN(S,G) TO_IN(null,G)	TO_IN(S,G) TO_IN(null,G)
	TO_EX(S,G) TO_EX(null,G)	IS_EX(null,G)	IS_EX(null,G)	TO_EX(null,G)
Source list change	ALLOW(S,G)	ALLOW(S,G)	ALLOW(S,G)	ALLOW(S,G)
	BLOCK(S,G)	BLOCK(S,G)	BLOCK(S,G)	BLOCK(S,G)

- The evolution lies in further simplification of message types

LW Router-Side Evolution

- Version -00
 - Remove filter-mode on router side and simplify greatly correlative operation
 - Simplify source record list operation
- Version -01
 - Editorial Improvement
- Version -02
 - Increase more detailed description of protocol behavior

Router Side Performance Test Result

- LW-IGMPv3 improves element operation rate:
 - Theoretical analysis: by around 40%
 - Actual simulation result: by 30% average
- LW-IGMPv3 decrease memory occupation by 12.5%
- Router has better stability with LW-IGMPv3 when user number increases

Thanks for BUPT (Beijing University of Posts and Telecommunications) for the simulation test

History of The Draft

- IETF 66, Montreal
 - draft-liu-magma-igmpv3-mldv2-lite-00.txt
 - Individual draft, first discussion
- IETF 67, San Diego
 - draft-liu-magma-igmpv3-mldv2-lite-02.txt
 - Add Host side process, change “Lite” to “Light Weight”
- IETF 68, Prague
 - draft-ietf-mboned-lightweight-igmpv3-mldv2-00
 - Accepted as WG draft, began to prepare implementations
- IETF 69, Chicago
 - draft-ietf-mboned-lightweight-igmpv3-mldv2-01
 - Router side and host side implementation available
- IETF 70, Vancouver
 - draft-ietf-mboned-lightweight-igmpv3-mldv2-02
 - Compatibility test result is given

Future Plan

- Draft editorial improvement
- Publish of the Open Source Code
- Initiate LC Process

Thanks !
