SMF Update

- -08 draft version still active no updates
- Authors are waiting for NHDP revisions to settle out consistencies for coexistent use cases
- Will submit for WG last call when this is settled
- More working code experience gained in using this in CF mode and in CDS modes with both MANET-OSPFv3 and OLSR instantiations
 - I-DPD without windowing
 - H-DPD Hashing modes (MD5, CRC32, SHA1)
 - Gatewaying to/from PIM domains, border filtering/control, merging multiple interfaces.
