

PAKE Process

IPsecME WG
IETF 77, Anaheim

Where we are

- Some proposed solutions
- A list of proposed selection criteria
- Differing views on which criteria are important and which proposed solutions should even be considered

What we will do today

- Mostly discuss criteria
- Primary intention: knowing which criteria are most important to each of us
- Secondary intention: each of us having a relative order of criteria
- Distant third: fitting in some of the proposed solutions to some of the criteria

What we will do in the near future

- Discuss criteria on the mailing list for about two more weeks
 - Try to get CFRG more involved on the security-related criteria discussion
- Do a consensus call on criteria in case we can get WG consensus
 - Even if not, this will help focus each of us on what criteria are important to us, and in what order

What we will do a few weeks from now

- Compare the proposed solutions **that have Internet Drafts by that time** to the criteria
 - The draft authors will probably do this for us
 - ...but there could be disagreement on this part
- Do this for another few weeks
- Hold a write-once poll of the WG
- Hope that something becomes clear from the poll

Or not

- We can discuss changes to this proposed process after the following presentation on criteria
