# ForCES Intra-NE High Availability draft 02

IETF – 82 Taipei

Kentaro Ogawa (ogawa.kentaro@lab.ntt.co.jp)
Weiming Wang (wmwang@mail.zjgsu.edu.cn)
Evangelos Haleplidis (ehalep@ece.upatras.gr)
Jamal Hadi Salim (hadi@mojatatu.com)

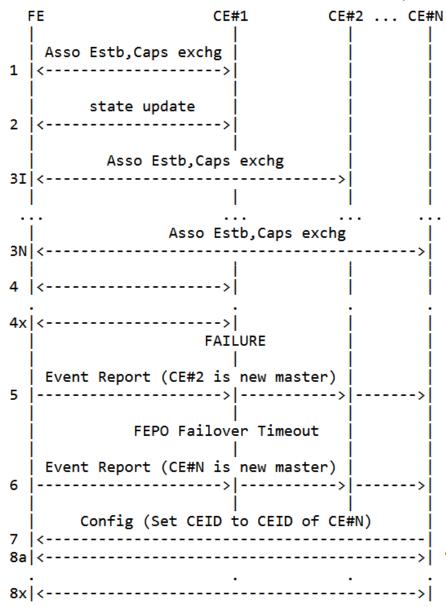

# Changes from 01

- Added figure for two scenarios of CE Failover for hot-standby.
- Added figure for State machine for High availability with hot-standby.
- Identified a possible backwards compatibility issue.

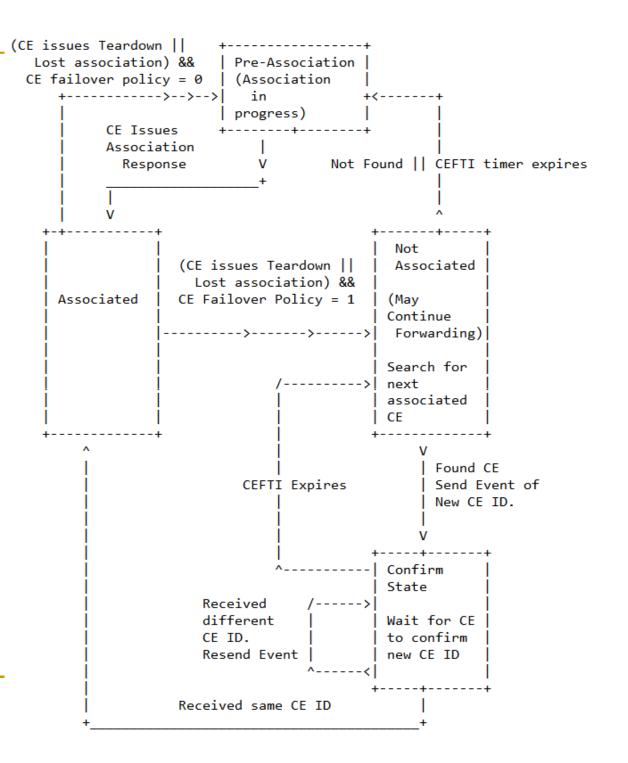

#### CE Failover for hot standby - I

```
CE#1
                       CE#2 ... CE#N
Asso Estb,Caps exchg
  state update
   Asso Estb, Caps exchg
        Asso Estb,Caps exchg
             FAILURE
Event Report (CE#2 is new master)
 ----->|----->|
Config (Set CEID to CEID of CE#2)
<---->
```

#### CE Failover for hot standby - II

FE State
Machine
considering
HA with Hot
Standby

### Backward compatibility issue

- FEPO's component 9 (Backup CEs) is not backwards compatible with previous version.
  - New CE, Old FE
    - Case 1: The new CE supports the old FE and chooses not to use CEHA. Interoperable.
    - Case 2: The new CE supports only v1 FE. No interoperability regarding Component 9 – Association will fail.
  - Old CE, New FE.
    - Case 1: CE does not support CEHA, but understands v1 FE.
       Interoperable but cannot use CEHA functions.
    - Case 2: CE, does not support v1 FE. No interoperability regarding Component 9 – Association will fail.

## Backward compatibility issue

- This is a pre-association version mismatch issue.
- It's up to the Managers to identify and not allow an association that would fail or cause problems.
