# Updates on draft-ietf-rmcat-gcc-01

Stefan Holmer, Google

Luca De Cicco, Gaetano Carlucci, Saverio Mascolo, Politecnico di Bari

## Updates since IETF 93

- The arrival time filter has been made scalar.
  - This simplifies the filter without impacting performance.
  - Filter no longer taking payload size into consideration:  
 $d(i) = L(i)/C + m(i) + v(i)$
- TFRC rate control limit has been removed.
  - Experimental evaluation has shown that the minimum limit of the TFRC rate control at the loss-based controller has no effect.
- More meaningful names for some variables.

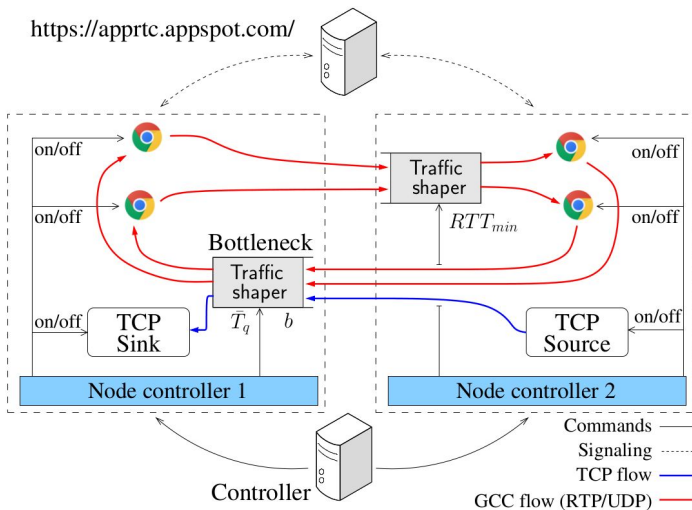

## Future Work

- Improve the loss-based controller.
  - Too aggressive, goal is to make it nicer to TCP.
- Add a Section on the Pacing mechanism.
- Add a Section on the Start-up phase.
- Consider improvements for mobile networks.

# Backup slides

# Emulator: TestBed settings

- Chromium version: **M45**
- Video Encoder: VP8
- Video sequence: [fourpeople\\_1280x720\\_30.yuv](#)
- Max-Min Video Encoder bitrate range: 50-2000 kbps
- Signalling: <https://apprtc.appspot.com/>

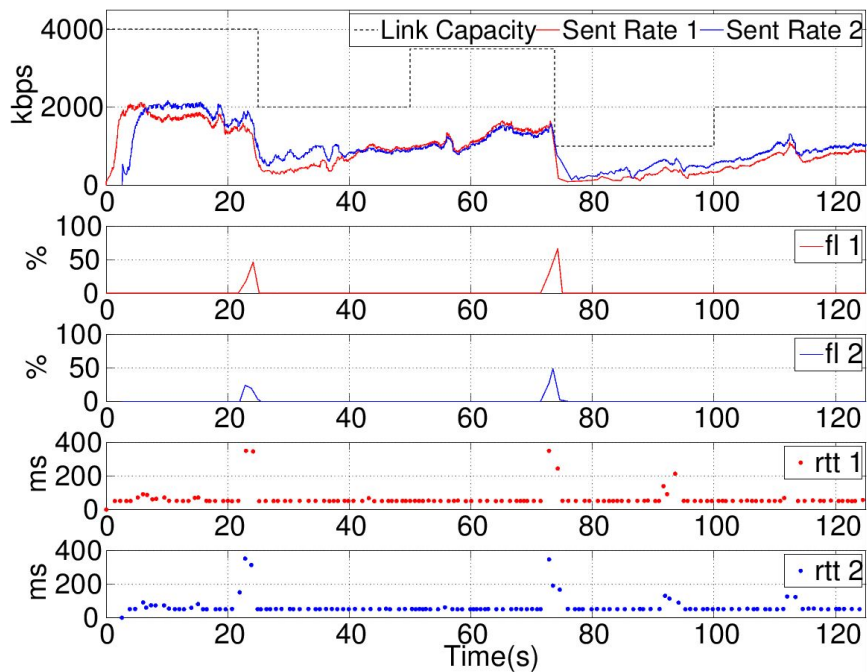

## WAN Emulation:

- `iproute2: tc+tb` module to set link capacity  $b$  constraint and buffer  $T_q$  size on Node 1
- `NetEm` to set propagation delay on Node 2

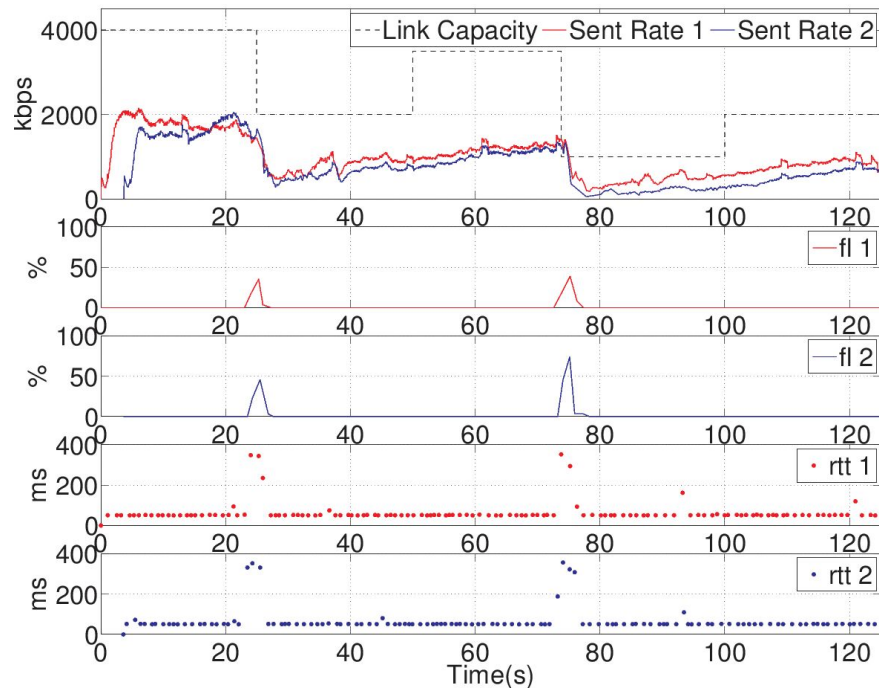

## Bottleneck parameters:

- Drop tail
- Queueing size: 300ms
- Min one-way path latency: 25ms
