

UiO : University of Oslo

Shared Bottleneck Detection for Coupled Congestion Control for RTP Media Update (draft-ietf-rmcat-sbd-04)

David Hayes (UiO)

Simone Ferlin (SRL), Michael Welzl (UiO), and Kristian Hiorth (UiO)

[**simula** . research laboratory]

Outline

- ▶ Changes 03 → 04
- ▶ Quantitative experimental results

Key changes in WG-03/4

Revisions

- ▶ Section outlining feedback requirements in the three possible scenarios.
- ▶ Reference Zhang's convex-hull algorithm for estimating and removing relative clock skew.
- ▶ Suggest skew_est based on previous T with no freq_est as an alternative for correcting the clock skew in situations where it is high. This is reliable, but noisier.

Quantitative Statistics – Simulation setup

Quantitative Statistics – Simulation setup

- ▶ Background traffic based on real traffic traces
 - ▶ > 90%
 - ▶ each iteration has different bottleneck traffic

Quantitative Statistics – Simulation setup

- ▶ Background traffic based on real traffic traces
 - ▶ > 90%
 - ▶ each iteration has different bottleneck traffic
- ▶ Flows 1 & 2 send at twice the rate of 3 & 4

Quantitative Statistics – Simulation setup

- ▶ Background traffic based on real traffic traces
 - ▶ > 90%
 - ▶ each iteration has different bottleneck traffic
- ▶ Flows 1 & 2 send at twice the rate of 3 & 4
- ▶ Various combinations of bottlenecks activated

Results % + 've correct — $\frac{100 \times \text{pos}}{(\text{pos} + \text{falseneg})}$

Percentage of bottleneck grouping decisions correct

Notes

points offset for clarity

error bars span all data

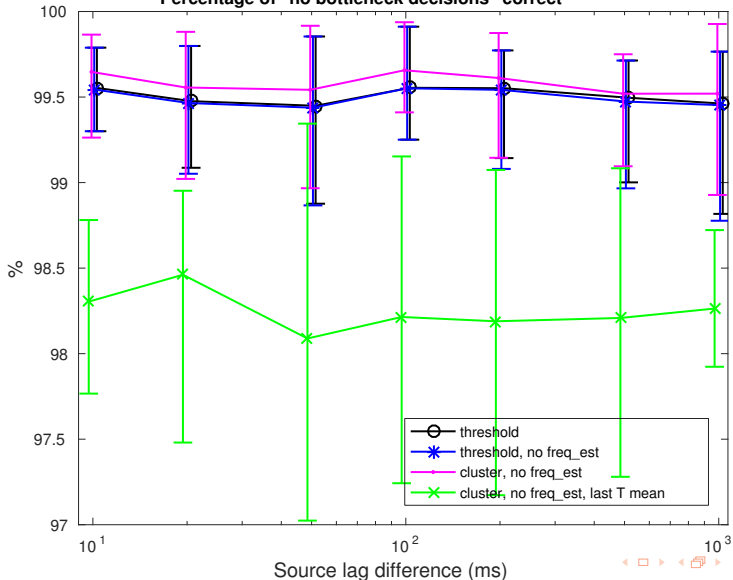

Accuracy wrt BN Q

▶ > 0 for 50% T

▶ stable

Results % -'ve correct — $\frac{100 \times \text{neg}}{(\text{falsepos} + \text{neg})}$

Percentage of "no bottleneck decisions" correct

Notes

points offset for clarity

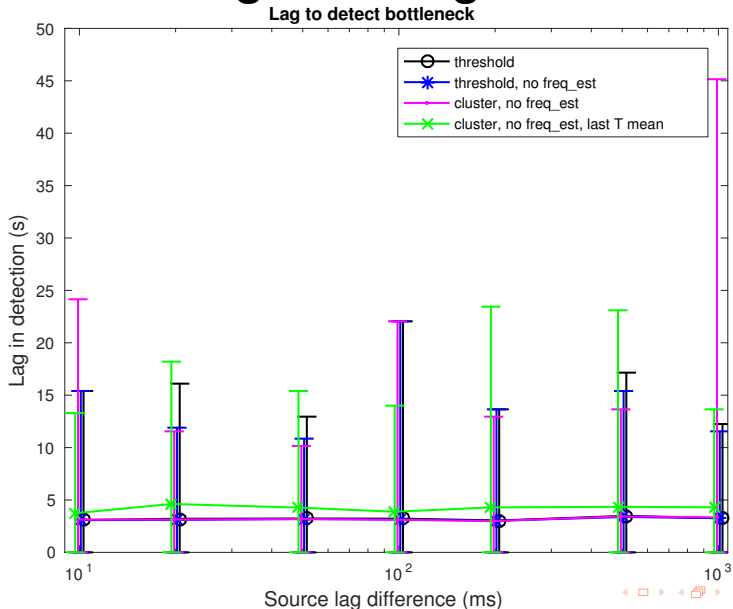

error bars span all data

Accuracy wrt BN Q

▶ > 0 for 50% T

▶ stable

Results lag detecting bottleneck

Notes

points offset for clarity

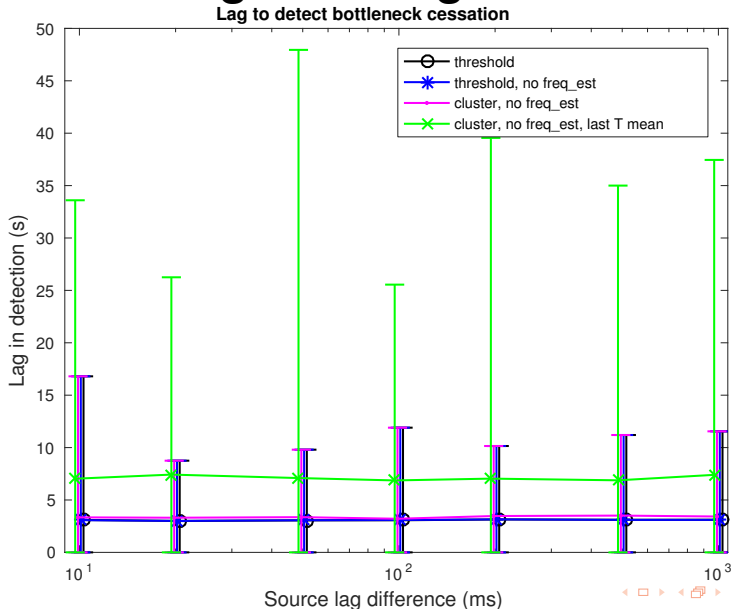

error bars span all data

Accuracy wrt BN Q

▶ > 0 for 50% T

▶ stable

Results lag detecting bottleneck cessation

Notes

points offset for clarity

error bars span all data

Accuracy wrt BN Q

▶ > 0 for 50% T

▶ stable

Conclusions

Status

- ▶ We think the document is ready for working group last call.
