Further to our liaison statement “Reply to Liaison regarding G.709 efforts in IETF” that was sent in June 2010. Appendix 1 (attached) provides a specific networking example illustrating the use of Transitional Links. The intent is to demonstrate the usage of the Transitional Link construct to represent various network architectures from a routing topology perspective. The modelling shown is provided to indicate the general direction of Q12’s work, and represents a work in progress.

The Q12/15 would appreciate any comments that the IETF has on the use of transitional links.
