Q.5/13, dealing with OAM aspects, met during a SG 13 meeting held in Geneva from the 17-28 July 2006. Please note that, during that meeting, Q.5/13 finalized 2 documents that have been subsequently consented by SG 13:

- Amendment 2 to I.610 (03/00) "B-ISDN operation and maintenance principles and functions". This amendment is in support of your work item on "Performance Management Across Multi-service Networks".

- New Recommendation Y.1714 (ex Y.17fw) "MPLS OAM framework". This Recommendation covers MPLS user-plane Operation Administration Maintenance (OAM), control plane aspects, and TMN aspects of MPLS management.

In the next weeks, these two documents will be submitted to a 4-week Last Call period, when ITU-T Member States and Sector Members will have the opportunity to make comments on the content of the drafts.
