

August 8, 2006

Mr. Chris Lonvick, clonvick@cisco.com
Chair, IETF Syslog Working Group

The Optical Internetworking Forum has been investigating the use of Syslog as a basis for logging IP-based signaling and routing protocols for Optical Networks. We have attached, for your information, our current work in progress on logging and auditing for signaling and routing. Your review and comments are always welcomed.

Our use of Syslog will benefit substantially from the completion of the work in your Charter, in particular, the work on signatures for log records. With the intention of helping to progress this work, the OIF, at its meeting last week, reviewed draft-ietf-syslog-sign-18 (after having reviewed the prior comments on this draft in the Syslog email archives). We have attached the results of this review.

Sincerely yours,

A handwritten signature in cursive script that reads "James D. Jones".

Jim Jones
Chair, OIF Technical Committee
