Email: ghassem@nortel.com

Q.7/13 would like to thank IETF PWE3 for your liaison statement regarding use of the term pseudowire. Based on the suggestion by your group we have added the following phrase in the scope of our document:

“This Recommendation is not intended to redefine the behaviour of the protocols specified in the normatively referenced IETF RFCs. In the event of discrepancies between protocols in this Recommendation and the normative RFCs, the IETF RFC is the authoritative source.”

In addition, we added the following at the beginning of the clause dealing with multi-segment pseudowires:

“In this Recommendation, for the multi-segment case, the PW label may be modified by the interworking function. This is in contrast to the single segment cases.”

We are also pleased to inform you that we agreed to forward our document for consent. Copy of the new draft is attached for your information.

Once again we thank IETF PWE3 for excellent cooperation with us during the course of our activities and we are looking forward for our continued cooperation.

Attachement: Y.1418 – Pseudowire layer network, TD 354 (PLEN)
