ITU-T Study Group 17 adopted a broad *Cybersecurity information exchange framework* draft work item (X.cybex – see Attachment 1) together with an array of platforms widely used by industry and governments today for this purpose.

One of these identified specifications is an ITU-T instantiation of IODEF found in RFC5070 (Dec. 2007). Study Group 17 seeks both to understand any constraints on this action from the IESG or other intellectual property holders, as well as engage the former IETF INCH community in a dialogue on possible improvements to or evolution of the specification that might be desirable.

The framework also includes a new work item for the exchange of threat-specific profile information identified as draft Recommendation ITU-T X.sips, *Framework for countering cyber attacks in SIP-based services* (see Attachment 2). Study Group 17 welcomes comment from the IETF SIP related working groups on this draft specification and looks forward to collaborating on how the framework in general and X.sips in particular could be integrated with IETF SIP work.

Attachments: 2

- 1) Proposed initial draft text for Rec. ITU-T X.cybex, *Cybersecurity information exchange framework* ([TD 0503 Rev.1](#)),
- 2) A proposal of draft text for draft Recommendation X.sips, *Framework for countering cyber attacks in SIP-based services* ([C 122](#))
