I am pleased to inform you that the World Telecommunication Standardization Assembly (WTSA) has just approved the following Recommendations:

- ITU-T G.8113.1 - Operations, Administration and Maintenance mechanism for MPLS-TP in Packet Transport Network (PTN).
- ITU-T G.8113.2 - Operations, administration and maintenance mechanisms for MPLS-TP networks using the tools defined for MPLS.

Since ITU-T G.8113.1 has been approved we request that you, as described in your liaison statement "Approval of MPLS-TP document related to G.8113.1 code point and two other MPLS-TP documents" (<https://datatracker.ietf.org/liaison/1156/>), initiate the process so that IANA can register and publish the Pseudowire Associated Channel Type and the final processing of draft-betts-itu-oam-ach-code-point-04, currently approved and in the RFC editor's queue can be completed. We would very much appreciate your treating the IANA registration and publication of the Pseudowire Associated Channel Type for ITU-T G.8113.1 as an urgent matter, so that approved ITU-T G.8113.1 can be published including the correct value. We would like to confirm this for delegates of WTSA by the plenary session to be held at 1430 GST on 23 November.

Thank you for your assistance in helping to move these two Recommendations forward.
