Email: [shimr@chinatelecom.cn](mailto:shimr@chinatelecom.cn)**Keywords:** SRv6; active method; passive method; integrated monitoring**Abstract:** This LS aims to inform IETF that SG11 received a Contribution SG11-C953 on Proposal to start a new work item - Q.SRv6\_im "Requirements and Reference Model for Integrated Monitoring of SRv6 Network". As consensus has not been reached to proceed, SG11 seeks the opinion from IETF about this subject.

ITU-T Study Group 11 would like to inform IETF spring WG that Contribution [SG11-C593](#) "Proposal to start a new work item - ITU-T Q.SRv6\_im "Requirements and Reference Model for Integrated Monitoring of SRv6 Network" was submitted to SG11 and there was no consensus reached to start the new work item. From some members' view, there are more experts on SRv6 in IETF, hence this work item initiated in IETF is better than in ITU-T. From the contributors' opinion, the study area of IETF and ITU-T is originally overlapped and these two SDOs have already reached an agreement on how to solve the "overlapped area" problems. They also had already launched the Recommendations on collaboration guidelines separately (RFC 6756 and T-REC-A.Sup3). From this LS, IETF spring WG is invited to share feedback to point out the current activities of IETF in regard to this topic and if there are any views on this work item. The contribution [SG11-C593](#) is attached.

SG11 welcome any additional comments toward cooperation with ITU-T in this field.
