IGMP and MLD snooping

Morten Jagd Christensen

Karen Kimball

Frank Solensky

Current status

- draft-ietf-magma-snoop-06
- WG last call completed on feb. 16.
- 1 WG comment – Pekka
  - Mostly editorial, one clarification
- + WG chair comments
- Note the modified section 2.1.1

Substantial comments

- Clarify that the switch must not reject membership reports because of source IP address of 0.0.0.0

- Be more systematic in the topology change section. Dont send general query on all ports because a host is added to an unused port

Substantial comments

- Reference [PROXY] functionality related to timeout of group membership entries, for example timer value.

- MLD snooping: Clarify the preferred method for identification of packets to be snooped.

Editorial comments

- Reordering of sections to make rfc-editor happy (or at least less miserable)

- Remove unwanted hyphenation

- Fix various typos

Next steps

- Follow-up on the mailinglist wrt. latest changes to section 2.1.1

- Issue version –07

- Next step in process?
