draft-ietf-ospf-lls-interface-id-01

- Very simple extension
- Have been presented multiple times
- Local Interface ID to be sent in OSPF Hellos using the LLS extension ([RFC5613](#))
- In sync with OSPFv3 and ISIS that uses Hellos to advertise local interface-ID
- Backward Compatibility with RFC 4203
- Available Implementation
- LLS TLV code-point already available via early IANA allocation

Next Steps ...

- Ready for WG Last Call
