

JSON Web Token Best Current Practices

draft-ietf-oauth-jwt-bcp

Michael B. Jones
IETF 101, London
March 2018

What I Won't Be Doing Here

- I will not be reviewing the background material on the goals and structure again
- Already done at IETF 99 – see it again at:
 - <https://datatracker.ietf.org/meeting/99/materials/slides-99-oauth-sessb-json-web-token-best-current-practices/>

Document Status

- Current draft is [draft-ietf-oauth-jwt-bcp-00](#)
 - No activity since July 2017 (during Prague IETF)
 - Document expired in January 2018

Actions Needed

- Brian Campbell sent a request for a clarification in July
 - The editors still need to apply this clarification
 - I'll plan to do that this week
- Reviews were requested in Chicago, Prague, and Singapore
 - None have been received since July
- *I'm unsure how to interpret this silence*

Next Steps

- Decide whether there's interest in continuing this work or not
- If we proceed, additional reviews are needed
