# Updates Since the last version

- Created Github to manage all L0 models across WSON & Flexi-grid: <https://github.com/younglee-ietf/actn-wson-flexi-grid>
- Introduced a new ietf-layer0-types module (<https://github.com/younglee-ietf/actn-wson-flexi-grid/blob/master/ietf-layer0-types%402018-10-22.yang>) to define groupings that are used to both WSON and Flex-grid modules, e.g.,
  - Node types,
  - Application code based on ITU-T G.698.2
  - Wavelength Assignment Policy.
  - Client types, etc.
- Complete augmentation of TE-tunnel model is now available; in particular, on all modules that require Flexi-grid specific labels and bandwidth.

# Current Status & Next Steps

- The draft depends on te-tunnel model stability, which should be soon attained.
- Other than the dependency of te-tunnel model, the model is ready for YANG doctor's review and WG LC.
