NETMOD WG

July 29, 2020

Rob Wilton

WGLC complete?

- Apologies that it has taken so long to resolve comments …

- All issues raised during WGLC should now have all been resolved …
  - subject to review/agreement by the submitters

- One issue one each draft to highlight:

Interface extensions – WGLC comments

https://github.com/netmod-wg/interface-extensions-yang/issues/15

- Proposal was to add new "in-discards-overflow" to this module

- Doesn't really fit in the scope of this draft

- Proposal is that this should go into the base ietf-interfaces YANG module, if anywhere

- Hence, no change here

Sub-interface VLAN model – WGLC comments

Most significant change is name change for modules:

old: **ietf-if-l3-vlan** =>

new: **ietf-if-vlan-encapsulation**

old: **ietf-flexible-encapsulation** =>

new: **ietf-if-flexible-encapsulation**
