

IETF RDDP WG Draft Status - November 2003, Minneapolis IETF meetings

-- Problem Statement and Architecture

draft-ietf-rddp-problem-statement-02.txt
draft-ietf-rddp-arch-03.txt

To become Informational RFCs.

Finished WG Last Call, and have been reviewed by our Area Director. Minor changes are needed to respond to the Area Director's comments before going to IETF Last Call.

-- Main Protocols

DDP (draft-ietf-rddp-ddp-01.txt)
RDMAP (draft-ietf-rddp-rdmap-01.txt)

To become Proposed Standard RFCs.

No technical issues meriting substantial meeting time, but drafts probably have not received extensive technical attention due to WG focus on TCP mapping issues. PLEASE REVIEW THESE DRAFTS!!

-- Applicability Statement

draft-ietf-rddp-applicability-01.txt

To become an Informational RFC.

On agenda for this meeting. Please review carefully; alignment of this draft with both the SCTP and TCP mapping drafts is important.

-- SCTP Mapping

draft-ietf-rddp-sctp-00.txt

To become a Proposed Standard RFC.

Despite the -00 version number, this is the fourth version of this draft, and it is relatively mature.

-- TCP Mapping

draft-ietf-rddp-mpa-00.txt

To become an Informational RFC.

The major open issues in this draft as of the Vienna meeting involved connection initiation/startup. Substantial meeting time allocated to make progress on these issues.

-- Security

draft-ietf-rddp-security-00.txt

Whether this will be Informational vs. Proposed Standard is TBD. This draft is on the critical path to completing the DDP and RDMAP drafts. Substantial meeting time has been allocated to it.
