

IPPM Metrics Registry

- Went through working group last call
- Had substantive MIB doctor comments
- New version (-06) based on comments

Question: other branches/bodies

- Still one question that should be resolved by group before going through WGLC and MIB doctor re-review
- Should this registry contain branches for enterprises or “other fora”?

Arguments to Keep Them

- One place to go look for performance metrics
- Entire MIB under IANA control
 - Recommendation by MIB doc. to have IANA do all assignments, rather than just top-level enterprise / “fora” assignments
 - But, allowing for enterprises, standards bodies to assign their own does distribute the load, if you expect load to be high

Arguments to Delete

- Simpler
- OLD is just abstract pointer in this usage, value (or prefix) is not important
- Just let organizations define whatever they want (so don't add load to IANA)

Question

- Is there any consensus in the room on whether these branches should exist?
