Pascal Thubert

Vijay Devarapalli

Home Agent Reliability

- Home Agent Reliability

- Is Hardware based solution enough?

- HAHA operates at Layer3
  - MIP/NEMO rely on L2 (Home Link/Proxy NDP)
  - L3 brings high scalability, better distribution, easy extensions

Global Distribution

- Place Home Agents in geographically distributed location
  - serve same home network (aggregation)

- Usage Scenarios
  - flight company has requirements to support multiple HAs in several networks
    - Assuming flight from France to San Francisco

Conclusion

- Should the NEMO WG work on these two issues?
