

draft-leinen-ipfix-tcp-01.txt

Describes IPFIX mapping over TCP

Changes

- ☐ Exporter now connects to collector
- ☐ TLS use described
 - must be mutually configured - no negotiation

Remaining issues

Some things don't really belong here

- Maximum message size
 - general protocol issue
- Suggested reaction to backpressure from TCP
 - too meter-specific

Structure not aligned with UDP/SCTP sections

Terminology nits

- "Exporter" vs "exporting process" etc. :-)

draft-leinen-ipfix-tcp-01.txt

Suggested way forward

- ☐ Finish integration into ipfix-protocol draft
 - by end of this month
- ☐ Let it ripen with the rest of the protocol I-D
