HIP DNS Extensions
draft-ietf-hip-dns-03.txt

Julien Laganier, Pekka Nikander

HIP WG, 64th IETF
Vancouver, BC, Canada

Tuesday, November, 8th, 2005

WGLC Summary

- Shorten introduction?

- Remove explanation and schemas of HIP exchange?

  - Asked for during cross area review.

  - Useful to explain what the RR is useful for.

WGLC Summary

- Do we want to merge HIPHI and HIPRVS RR?

- Only one HIP RR with:

  - DNS name of the RVS server, non-compressed FQDN in binary form

    - if NULL, use the present FQDN to fetch A and AAAA records

  - HIT length (bytes), HIT in binary

  - PK algorithm, PK length (multiple of 8), PK in binary

- More efficient: only one lookup for HIP material
