

# SIP-Unfriendly Functions in Current Communication Architectures

`draft-camarillo-sipping-sbc-funcs-02.txt`

[Jani.Hautakorpi@ericsson.com](mailto:Jani.Hautakorpi@ericsson.com)

# The Idea

- Document those **functions** in current communication architectures that **break SIP** in some way.
  - Problems people have that are currently resolved in a SIP-unfriendly way.
  - Explains in which sense current solutions are SIP unfriendly.
- These functions are implemented mainly in SBCs.

# Future Work Based on this Draft

- Future work to be done using this document as input:
  - Identify existing SIP-friendly mechanisms to resolve the problems.
  - Develop new SIP-friendly mechanisms.

# Changes and The Way Forward

- Changes:
  - We added **concrete examples** from each function explained in the draft.
- The way forward:
  - The draft is quite stable.
  - Does the WG see this as useful?
  - Should this be documented as a RFC or not?
