

Conference Bridge Transcoding Model

draft-ietf-sipping-transc-conf-00.txt

Gonzalo.Camarillo@ericsson.com

Incompatibility Type

- Transcoder's URI identifies a transcoder of a particular type
- Is there a need for the UAC to provide further information to the transcoder?

Does Consent Apply?

- Consent applies when:
 - There is amplification
 - The target URI is translated to a destination URI unknown to the UAC
- In this model:
 - There is no amplification
 - Only one destination URI
 - The translation (destination URI) is provided by the UAC
