Freenet6 History

- **Started Feb. 1999 with web-based interface**
- **Using TSP since May 2001**
- **Went from experimental to real deployment in February 2003**
 - Using HexOS 1.0
- **September 2004**
 - NAT traversal
 - Switched from 6Bone addressing to “production” addresses
- **October 2005**
 - Transferred to Teleglobe POP for better performance and routing

Number of users

- **Fall 2004**
 - 112000 different endpoints in database (anonymous and users)
 - Approximately 4500 active tunnels at all time.
- **Now (with new server)**
 - Registered users: 16408
 - Allocated prefixes: 3737
 - Total number of tunnels: 9239
 - Tunnels with NAT traversal: 4298 (roughly 50%)
