Kerberos Information Model

- draft-johansson-kerberos-model-03.txt
- Why?
  - common ground for an administrative model for kerberos
  - input to (eg) LDAP Schema work
- How?
  - English text (i.e *not* a formal language).

Open Issues

- Use a formal language?

- Cover things in the model which may not become part of a future LDAP schema for instance pw policy (which is covered by other work in LDAP space)?

- How to get from here to an LDAP schema an consensus?
