

# **IPv4 Support for Proxy Mobile IPv6**

## **draft-ietf-netlmm-pmip6-ipv4-support-02.txt**

---

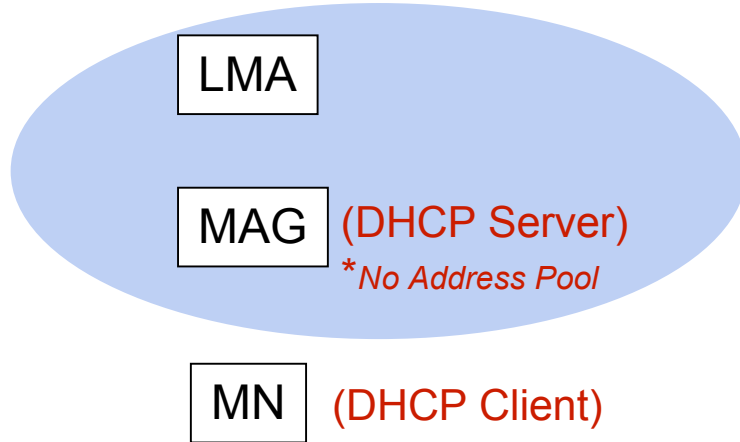

Ryuji Wakikawa  
Sri Gundavelli

# Updates

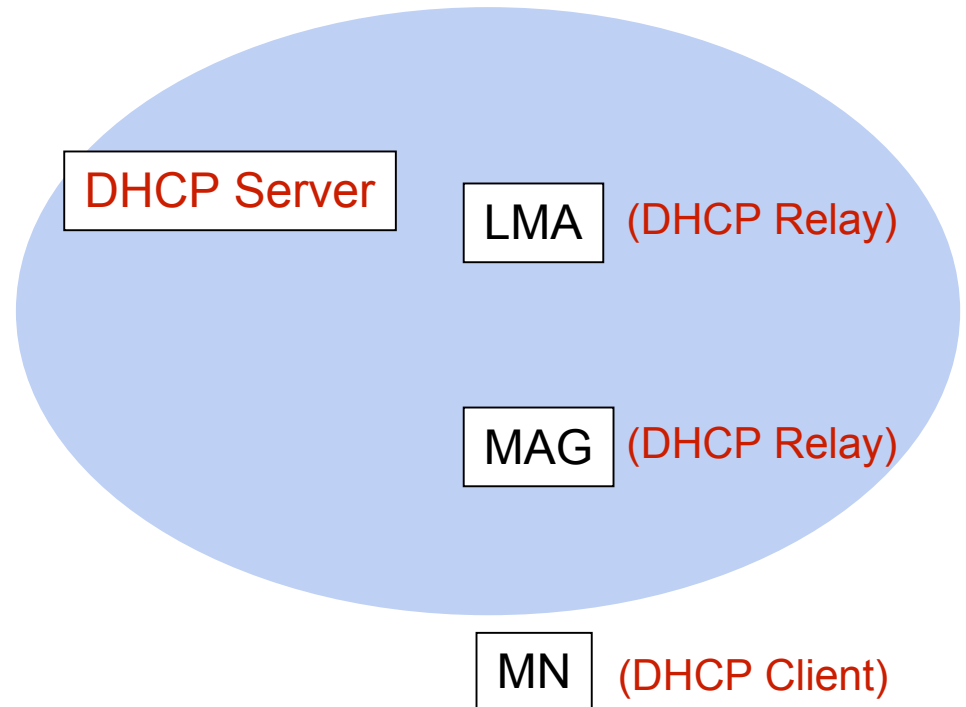

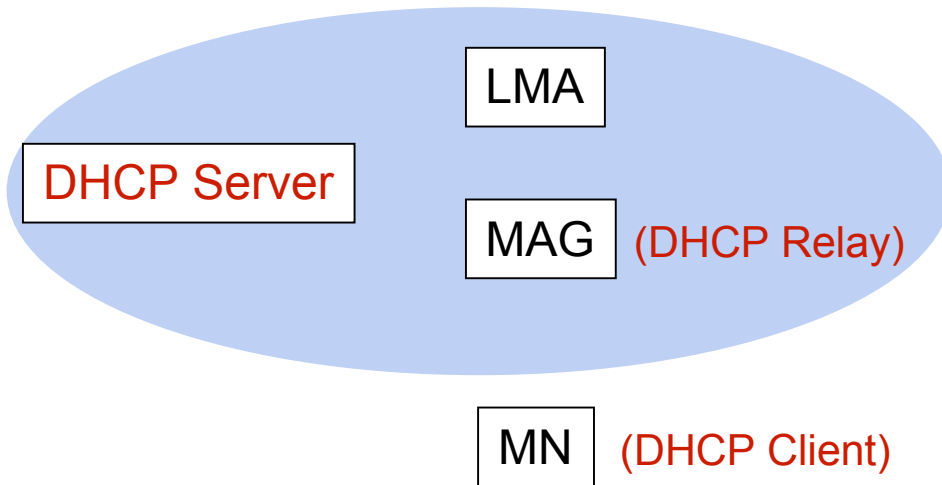

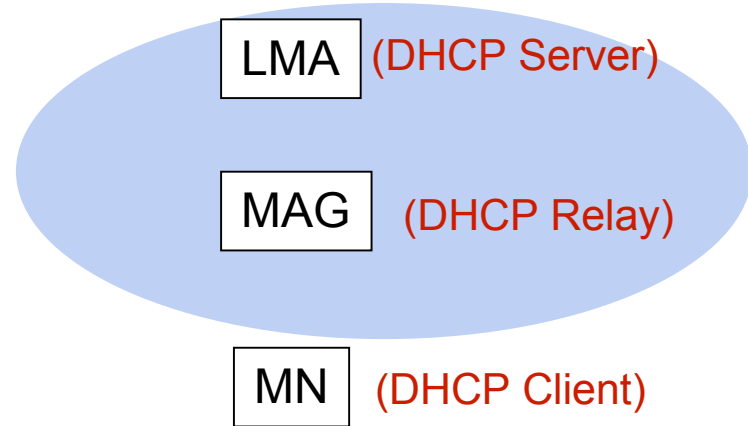

- DHCP Configurations
  - Adding two scenarios as bases
  - Adding more scenarios in Appendix
- Catching up to the latest PMIPv6
  - support multihomed mobile node
  - support inter-access handoff
- Several editorial updates

# Various DHCP Configurations

1) DHCP-S is at each MAG

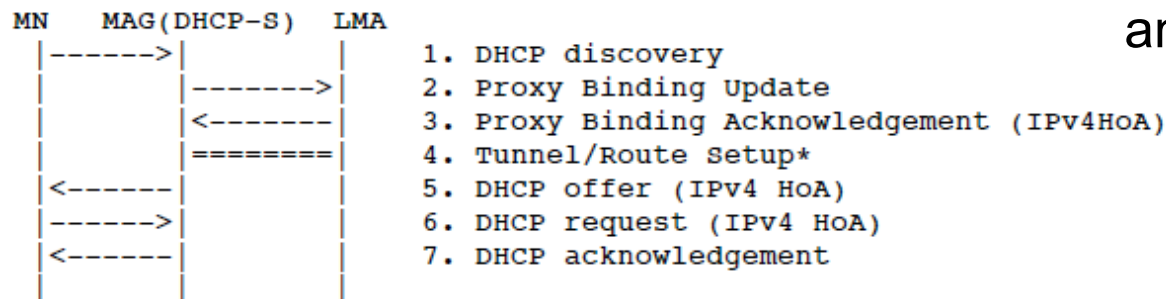

2) DHCP-S is at LMA

# DHCP-S is located at MAG

- MAG is DHCP Server without Address Pool
- MAG retrieves IPv4 address for MN from LMA by PBU/PBA (IPv4 HoA: 0.0.0.0)
- After successful PBA, MAG sends DHCP offer
- Handover Consideration
  - IPv4 HoA assignment info is always retrieved by MAG from proxy binding registration or from policy profile
- DHCP Server ID Change
  - Assigning the same DHCP server ID
  - Changing MN's DHCP client state to REBINDING state
- DHCP message is unicasted to previous MAG
  - MAG intercepts all the unicasted DHCP messages and rejected these

\* Tunnel/Route setup(no.4) and DHCP offer/request/ack(no.5-7) are processed in parallel.

# DHCP-S is located at LMA

- LMA is DHCP Server and MAG is DHCP Relay
- After DHCP ack, MAG sends PBU for the assigned IPv4 HoA
- Handover Consideration
  - IPv4 HoA assignment info is always retrieved by MAG from the policy profile
- DHCP relay intercepts packets sent only to broadcast address
  - DHCP relay (MAG) must analyze all the DHCP related packets at the MN-AR link, intercepted and forwarded them to LMA if needed
