

Nicknames

- SIMPLE WG: draft-ietf-simple-chat describes an MSRP specific solution for Nicknames:
 - Provides only a method to set, transport and remove a nickname string.
 - Unique only within the scope of a conference - left to focus if it wants to apply wider scope.
 - The focus can make use of a future mechanism that is more generic.
- Text-based “chat” as an alternative media type described in draft-boulton-xcon-session-chat-0
 - Intent is to have no impact on existing IM protocols
 - Detailed call flows will go in XCON call flow doc
 - Document describes chat service features currently not supported with XCON – Nickname is a basic building block that is currently undefined.
- Topic on the agenda for XCON session on Thursday, 1740-1930 (Salon E)
