SDP Media Capability Negotiation

Bob Gilman, Flemming Andreasen and Roni Even

draft-ietf-mmusic-sdp-media-capabilities-09.txt

I E T F

Media Capabilities

- Extends the base capabilities negotiation for RTP based media
- Why do we need it
  - Codec definition can be very complicated
    - Redundancy codecs (like FEC)
    - Composite like layered codecs
    - Support for Alternative offering
    - Semantics of more than one m-line with same media type
- Allows offering capabilities that can be used as configuration later.

Changes from version 08

- Minor editorial changes and fixing the syntax of an answer in section 4.3

Next step

- We had a good review from Kevin Fleming
  - Will require some editorial fixes and clarifications
- The draft is stable for some time.
- Need volunteers to review the draft
- Suggest starting WGLC
