

NETMOD Architecture Draft

draft-ietf-netmod-arch-04.txt

IETF77

Phil Shafer

<phil@juniper.net>

Comments and Feedback

- Few comments on previous draft revisions
 - Mainly requesting that sections be removed
- Last Call yielded more comments
 - Mainly saying the content was not correct
 - No clear storyline
 - Fragmented
 - Not addressing the chartered item
 - WG goals for this document are not clearly defined

WG Goals

- What does the WG want in the draft?
- Architecture means:
 - What problem you are solving
 - How the individual pieces of the solution work
 - How they fit together
 - How you build something with them

Second Attempt

- Rewrite with new focus:
 - (a) why we did it // the problem domain
 - (b) what we did // how the moving parts work
 - (c) how you use it // what a yang-based solution looks like
 - (d) real world issues // minor bits that need to be written down

Changes from -03 to -04.txt

- New text on many issues
- New organization
- More complete “overview” material
- Discuss IAB NM WS issues and how they are addressed
- Reworked text to add better storyline
- Fixed issues from Juergen’s review

New draft: draft-ietf-netmod-arch-04.txt

- New Outline:
 - Origins of YANG
 - Elements of YANG
 - Working with YANG
 - Modeling Considerations
- Doubled in length

New draft: draft-ietf-netmod-arch-04.txt

- Slipped in before the draft cut-off
(with 1.5 hrs to spare)
- Missing two sections
 - Proposed contents posted to the mailing list
 - Will be in the post-IETF77 revision

But the question remains:

- Does this new revision address the content the WG has in mind?
- What is missing?
- Please read the post-IETF draft
- Please send comments
