

IETF-78, 28 jul 2010

NAI Dynamic Server Discovery

Status of draft

- Still in WG process
- Issues #13 + #14 open
- Fixes in pending rev:
 - „only about RADIUS, not AAA in general?“ -> after IETF-77, dime synced their DDDS Application usage; but in own document. So yes, meanwhile document is RADIUS-only
 - i18n in User-Name? Purge references to 4282; only speak of „the stuff right of the last @ in User-Name“
 - Wording and editorial fixes: RadSec, abstract
