# Open issues

- Handling “-” in offer/answer procedure
  - Media format may be omitted (endpoints may not be aware of the codecs used on the CS bearer)
  - Proposal: need to explicitly define endpoint behavior (“-” means “don’t care”?)
- Discriminator byte in User-User Information Element
  - UUIE has a discriminator byte which doesn’t fit to the current ABNF definition (ALPHA/DIGIT) of “uuie” correlation mechanism
  - Proposal: a) fix ABNF accordingly, or b) specify that discriminator byte is not included in “uuie” parameter

# Next steps

- Fix the open issues
- Write Offer/Answer procedures for the whole draft
  - Currently O/A covers only negotiating the correlations mechanisms
- Release an updated version
- WGLC before June?
