# Blockwise transfers in CoAP

# draft-ietf-core-block-04

*C. Bormann, Z. Shelby*

CoRE WG, IETF-81 Quebec City

# Current Status

- Changes in -03
  - Enabled block transfer in request and response (BLOCK1, BLOCK2)
    - Main use case is RPC using POST
- Changes in -04
  - Editorial improvements
- -02 is implemented pretty widely
- -03 has a few implementations (BLOCK1)

# Work Needed

- Re-write the draft!
- Better names for BLOCK1, BLOCK2?
  - Haven't found consensus yet on the names…
- Clarify that a 4.13 (Request Entity Too Large) may mean either "truncated" or "do not have resources for blockwise" [Esko Dijk]
