draft-ietf-ecrit-data-only-ea-02

BRIAN ROSEN

HANNES TSCHOFENIG

Purpose

- Provide a way to send emergency data to a PSAP (citizen to authority alert)

- Examples include sensor alerts of various kinds (alarm, medical, telematics, ...)

- Uses SIP so that we can employ –phonebcp/location conveyance/... as is

- Uses "Additional Data" to carry sensor and other device or alert specific data

Open Issue – CAP, it's role, and where this mechanism is used

- What SIP messages does it work on?
  - MESSAGE (only)
  - INVITE/PUBLISH/… as well as MESSAGE
- If it's MESSAGE (only) how do you get sensor, … data that would otherwise be carried here an, e.g. INVITE
- What is the role of CAP here?
  - Is there anything in a CAP message we lose if we don't use CAP
- Should we allow CAP message in Call-Info?
